ATKOSoft signed a contract with Municipality of Perama for the development of its Telemedicine Project

Athens, December 2005

ATKOSoft SA signed with the Municipality of Perama Telemedicine Project contract, of a value of 374.000 Euro.

This project (an ATKOSoft's Frontis HomeCare System implementation) aims at the provision of HomeCare services to the disabled, elderly etc. citizens at regular scheduled intervals.

The Telemedicine system consists of a Mobile Telemedicine Unit equipped with mobile IT and connected medical devices, along with telecommunication infrastructure that links the mobile unit with the Central Support Unit, located at the municipality's medical Center.

The Central Support Unit maintains the citizen health record with the results of all the medical services, exams etc. provided by the municipality's health services, schedules the mobile unit visits on a day to day basis for supported citizens, organizes shifts etc. as well as supports the expert advice to the Mobile Telemedicine Unit personnel for treatment etc. of visited citizen.

This project is the first of its kind in Greece, and it is considered a model project for the few thousand municipalities of Greece that receive EU funding for the provision of health & social services to their citizens.

ATKOSoft is the main contractor and software & technology provider of this project

ATKOSoft is highly specialised in the development and implementation of software applications, and in particular in Health Informatics Sector, offering integrated solutions that allow the effective management of healthcare service provision and the rationalization of service costs and also contribute to the development of innovative business models - such as Managed Care Networks - and innovative services - such as Home Care and Telemedicine. In addition ATKOSoft provides Consulting services that are crucial to the successful implementation of the project, the full adoption of project results by end users and the proper function of the developed system.

ATKOSoft's software applications of Medical Information Technology, have been installed in big Public and Private Organisations of Health, in Greece and in countries of European Union, as they are indicatively reported: Greece: National Health System (B'RNHS) General Chest Diseases Hospital Of Athens "Sotiria", Ophthalmology' Centre Athens, Medical Center of Athens, Clinic Saint Helen, Creta Interclinic, the Diagnostic and Therapeutic Centre of Athens "HYGEIA", Regional Health System of Cyclades, Regional Health System of Crete, etc, Abroad: Southern Health Board (Ireland) with more than 3000 users, Vellinge Municipality and Sahlgrenska University Hospital (Sweden), Hospital Egas-Moniz (Portugal), ALENIA Aerospazio and Azienda USL5 (Italy) etc
