

**Project title:**

**Implementation of a System for the Management of Healthcare Services for "CRETA INTERCLINIC" Hospital**

**Implementing Organization:**                      **ATKOSoft S.A.**

**Subject:**

Creta Interclinic, a private hospital at Herakleio, Crete, in Greece, signed a contract with **ATKOSoft**, for the implementation of the **aMedLine**® suite of software applications.

The hospital has a bed capacity of 60 beds and 4 Intensive Care beds whereas it consists of several medical departments including Surgery, Orthopaedic Dpt, Pathology, Ophthalmology, Cardiology, etc. The clinic also has Outpatient Dpt, Emergency Dpt and Clinical Laboratories and the, unique in Crete, Unit of Orthopaedic Surgery Rehabilitation Unit. Medical equipment of the clinic includes Axial Tomographer, Digital Angiocardiographer and Digital Angiographer.

The implementation of the project will have as a result:

- The effective and integrated management of healthcare and administrative information that derive from the hospital operation.
- The automation of workflow within the clinic
- The rationalization of clinic operating costs,
- The increase of productivity of medical and administrative personnel
- The provision of an extremely powerful managerial tool in strategic decision making
- The use of a software application that can evolve with the clinic future needs and effectively support the cooperation of the clinic with other health organizations and professionals as well as the provision of enhanced and new, innovative services like Health Card, Home Care Services, Telemedicine, etc.

The know how gained by this project involves the adaptation of software to the business model of a clinic, the implementation of infrastructure and controls of managerial and administrative operations, etc.
